Year 6

Addition

Finding 1 more by counting. Find the total number of items in two groups by counting all of them. Counting up to 20.

Combining two parts to make a whole: part whole model. Starting at the bigger number and counting on. Regrouping to make 10.

Adding three single digits. Column method- no regrouping.

Column method- regrouping. (up to 3 digits)

Column method- regrouping. (up to 4 digits)

Column method- regrouping. (with more than 4 digits). (Decimals – with the same amount of decimal places).

Column method- regrouping. (Decimals-with different amounts of decimal places).

Topic: Addition & Subtraction

Early Years Foundation Stage

Stem sentence/ Maths talk

4 is a part, 3 is a part, 7 is the whole. , One more than ____ is _____. Adding one more to ____ gives us _____. Adding two to an odd number gives us the next odd number. Adding two to an even number gives the next even number. When 0 is added to any number, the number remains unchanged. Doubling a whole number always gives an even number.

Notes / Vocabulary	Concrete	Pictorial	Abstract
Start with 1, 2, 3 Then 4 & 5 including 0 6, 7, 8 Then 9 & 10 Use in continuous provisions and outdoor provisions.	Representing Children use concrete objects which they can count or subitise. 	Children can match picture cards to abstract numbers for 1, 2, 3 	Children can mark make and start to recognise the abstract to the concrete and pictorial.
Children begin to understand that as we count each number is 1 more than the number before. Use stories and songs which count on and back.	Comparing Use loose parts for children to build their own one more/one less patterns. 	Use picture card games. Asking the children to pick a card and see who has more and who has less. 	Ordering numbers based on matching the pictorial with the abstract. Can combine the two.
Introduce the idea that all numbers are made up of smaller numbers	Composition Use concrete resources and part-whole models to show that 3 can be made in different ways. 	Picture representations represented in different ways 	Introducing the concept of + and = $1 + 2 = 3$ $2 + 1 = 3$

Children in Reception will:

- Count objects, actions and sounds
- Subitise
- Link the numeral with its number value
- Count beyond ten
- Compare numbers
- Understand the 'one more/one less' relationship between consecutive numbers.
- Explore the composition of numbers to 10
- Automatically recall number bonds 0-5 and some to 10

Early Learning Goals

- Have a deep understanding of numbers to 10, including the composition of each number
- Subitise(recognize quantities without counting) up to 5.
- Automatically recall (without reference to rhymes. Counting or other aids) numbers bonds up to 5 (including subtraction facts) and some number bonds to 10, including double facts

Topic: Addition

Year 1

Stem sentence/ Maths talk

- 4 is a part, 3 is a part, 7 is the whole.
- One more than ____ is ____.
- Adding one more to ____ gives us ____.
- Adding two to an odd number gives us the next odd number.
- Adding two to an even number gives the next even number.
- When 0 is added to any number, the number remains unchanged.
- Doubling a whole number always gives an even number.

Year group objectives

- To read, write and interpret mathematical statements involving +, - and =
- To represent and use number bonds and related facts subtraction facts within 20.
- To add and subtract one-digit and two-digit numbers to 20, including zero.
- To solve one-step problems that involve addition and subtraction, using concrete object, pictorial representations, and missing number problems such as $7 = ? - 9$

Notes / Vocabulary	Concrete	Pictorial	Abstract
Parts, whole, addition, sum, total, addition add, more, and make, sum, total altogether. Fact Families establishing that $3 + 4 = 7$ $4 + 3 = 7$ $7 = 4 + 3$ $7 = 3 + 4$	Identifying parts and wholes (using a range of different resources).  Important for children to find different combinations for making parts and wholes within a set number of resources.	 Here are some frogs. - Can you see two groups of frogs? - How many frogs are in each group? - Complete the sentences. _____ is a part. _____ is a part. The whole is _____	$4 + 3 = 7$ ($7 = 4 + 3$) 4 is a part, 3 is a part 7 is the whole. $3 + 4 = 7$ ($7 = 3 + 4$) 3 is a part, 4 is a part 7 is the whole. 
Number bonds, tens frame, numicon, 	Systematic number bonds to 10  Use tens frames, counters, cubes, numicon, fingers etc. Include zero.	 Use bar models and part-whole models systematically.	$0 + __ = 10$ $10 = 5 + __$ $1 + __ = 10$ $10 = 6 + __$ $2 + __ = 10$ $10 = 7 + __$ $3 + __ = 10$ $10 = 8 + __$ $4 + __ = 10$ $10 = 9 + __$ $5 + __ = 10$ $10 = 10 + __$ Show statements with equal signs in different places

Topic: Addition

Year 1

Adding more, counting on, jumps, number line.	Adding more (use cubes, counters, numicon) 	Use a bar model to encourage the children to count on. 	Using an abstract number line  What is 2 more than 4? What is the sum of 2 and 4? What is the total of 2 and 4? $4 + 2 = 6$
Numicon, tens frame Use application of number bond facts to support. If I know that $5 + 5 = 10$, then I know that $6 + 5 = 11$. 11 is one more than 10.	Addition up to 20 (by using a tens frames and counters, cubes or numicon) $6 + 5 = 11$ 	Children to draw counters within the tens frame. 	Children to develop understanding of equality. $6 + \underline{\hspace{1cm}} = 11$ $11 = 5 + \underline{\hspace{1cm}}$ $6 + 5 = 5 + \underline{\hspace{1cm}}$ $6 + 5 = \underline{\hspace{1cm}} + 4$ Use missing values to pattern seek $11 = 6 + 5$, $11 = 7 + 4$, $11 = 8 + 3$, $11 = 9 + 2$

Example arithmetic questions

$3 + 5 = \underline{\hspace{1cm}}$

$2 + 8 = \underline{\hspace{1cm}}$

$12 + 5 = \underline{\hspace{1cm}}$

$\underline{\hspace{1cm}} = 1 + 8$

$\underline{\hspace{1cm}} = 14 + 3$

$\underline{\hspace{1cm}} = 20 + 0$

Year group objectives

- To read, write and interpret mathematical statements involving +, - and =
- To represent and use number bonds and related facts subtraction facts within 20.
- To add and subtract one-digit and two-digit numbers to 20, including zero.
- To solve one-step problems that involve addition and subtraction, using concrete object, pictorial representations, and missing number problems such as $7 = ? - 9$

Topic: Addition

Year 2

Stem sentence/ Maths talk

There are ____ and ____ and _____. Altogether there are _____.

When we add three numbers, the total will be the same whichever pair we add first.

If you change the order of the numbers, the sum remains the same.

First I partition the ____, plus ____ is equal to _____. Then ____ plus ____ is equal to 10. ...and then then plus ____ is equal to _____.

____ is one more than _____. ____ is equal to ____ plus one. ____ plus one is equal to _____.

I know that ____ plus ____ is equal to _____.so ____ plus ____ is equal to _____.

Notes / Vocabulary	Concrete	Pictorial	Abstract																																								
Tens, ones, partition, place value, base ten, place value counters. Be explicit with place value when moving onto written methods, including using zero as a place holder.	Partitioning two-digit numbers into tens and ones <table><tr><td>Tens</td><td>Ones</td></tr><tr><td></td><td></td></tr></table> <table><tr><td>Tens</td><td>Ones</td></tr><tr><td></td><td></td></tr></table>	Tens	Ones			Tens	Ones			 	$80 + 4 = 84$ $80 + \underline{\hspace{1cm}} = 84$ $20 + 5 = 25$ $20 + \underline{\hspace{1cm}} = 25$ Introduce written method adding multiple of ten and ones together. <table><tr><td></td><td>T</td><td>O</td></tr><tr><td></td><td>8</td><td>0</td></tr><tr><td>+</td><td></td><td>4</td></tr><tr><td></td><td>8</td><td>4</td></tr></table> Be explicit with PV when explaining. 0 ones + 4 ones = 4 ones 8 tens + 0 tens = 8 tens 8 tens = 80 4 ones = 4 $80 + 4 = 84$		T	O		8	0	+		4		8	4

+	4	0																																									
	9	4																																									

Year group objectives

To use concrete objects and pictorial representations, including number, quantities and measure.

To apply increasing knowledge of mental and written methods

To recall and use + and – facts to 20 fluently and derive and use related facts up to 100

To add and subtract numbers using concrete objects, pictorial representations, and mentally, including:

- A two-digit number and ones
- A two-digit number and tens
- 2 two-digit numbers
- 3 one-digit numbers.

To show that addition can be done in any order (commutative) and subtraction cannot.

To recognise and use the inverse relationship between + and – and use this to check calculations and solve missing number problems.

Topic: Addition

Year 2

Formal written methods without regrouping. Encourage children to count on mentally and apply knowledge of number bonds.	Adding two, two digit numbers 	Children can draw their own frames. 	Explicit when modelling 1 ones + 7 ones = 8 ones 4 tens + 1 ten = 5 tens 5 tens = 50 8 ones = 8 50 + 8 = 58 
Addition, subtraction, opposite, inverse, parts, whole, bar model, place value.	Using inverse to check missing number problems	Use bar model or missing part –whole models 	30 + ___ = 75 ___ + 22 = 55 80 = 40 + ___ 36 = ___ + 16 
Ones, counters parts, whole, altogether, counting on.	Adding three, one-digit numbers together 		3 + 2 + 4 = 9 4 + 3 + 5 = 12 Progress to missing numbers 3 + ___ + 4 = 9 4 + 3 + ___ = 12

Year group objectives

To use concrete objects and pictorial representations, including number, quantities and measure.

To apply increasing knowledge of mental and written methods

To recall and use + and – facts to 20 fluently and derive and use related facts up to 100

To add and subtract numbers using concrete objects, pictorial representations, and mentally, including:

- A two-digit number and ones
- A two-digit number and tens
- 2 two-digit numbers
- 3 one-digit numbers.

To show that addition can be done in any order (commutative) and subtraction cannot.

To recognise and use the inverse relationship between + and – and use this to check calculations and solve missing number problems.

Example arithmetic questions from KS1 SATS

$5 + 10 + 5 =$

$98 + 4 =$

+ 8 = 12

$5 + 32 =$

$22 + 22 =$

$68 + 20 =$

Topic: Addition

Year 3

Stem sentence/ Maths talk

There are ten tens in one hundred.
There are one hundred ones in one hundred.
___ones/tens/hundreds plus/minus ones/tens/hundreds is equal to ___ones/tens/hundreds
If I have ___ones, I can exchange them for ___ten and ___ones.
If I have ___tens, I can exchange them for ___hundred and ___tens
I will exchange 1 hundred for ___tens, then 1 ten for ___ones.
There are ___hundreds ___tens and ___ones. The answer is ____

Year group objectives

Add whole numbers with up to 3 digits, including using formal written methods

Add numbers mentally including-
3 digit number and ones
3 digit number and tens
3 digit number and hundreds

Estimate the answer to a calculation and use inverse operations to check answer.

Solve addition problems including missing number facts, place value and more complex addition.

Notes / Vocabulary	Concrete	Pictorial	Abstract
addition add, more, and make, sum, total altogether double near double half, halve one more, two more ... ten more ... one hundred more, inverse Use of place value counters to add HTO + TO, HTO + HTO etc. once the children have had practice, they should be able to apply it to larger numbers and the abstract	Use of place value counters 	Use of a place value grid and drawn images 	243 +368 611 11

Estimate the answer to a calculation and use inverse operations to check answer.
Solve addition problems including missing number facts, place value and more complex addition.

Topic: Addition

Year 4

Stem sentence/ Maths talk

There are ten hundreds in one thousand. There are one hundred tens in one thousand. There are one thousand ones in one thousand.

_____ plus _____ plus the 1 that I exchanged from the last column equals _____

When rounding to the nearest thousand, the hundreds digit is the one we need to consider.

When rounding to the nearest hundred, the tens digit is the one we need to consider.

When rounding to the nearest ten, the ones digit is the one we need to consider

Notes / Vocabulary	Concrete	Pictorial	Abstract
addition add, more, and make, sum, total altogether double near double half, halve one more, two more ... ten more ... one hundred more, inverse Use of place value counters to add THTO + HTO, THTO + THTO etc. once the children have had practice, they should be able to apply it to larger numbers and the abstract Addition of decimal numbers in context – using money.	Children continue to use dienes or place value counters to add, exchanging ten ones for a ten and ten tens for a hundred and ten hundreds for a thousand.  Include examples that exchange in ones, tens and hundreds and in more than 1 column.	Use of a place value grid and drawn images  	  Include examples that exchange in ones, tens hundreds and in more than 1 column.

Year group objectives

Add whole numbers with up to 4 digits, including using formal written methods.

Estimate and use inverse operations to check operations to check answers to a calculation.

Solve addition 2 step problems in context

Solve addition problems including missing number facts, place value and more complex addition.

Topic: Addition

Year 4

Notes / Vocabulary	Concrete	Pictorial	Abstract
Mental strategies and inverse operations involving fact families. Part whole models to support.	Use place value counters or represent pictorially. Use place value equipment on a place value grid to organise thinking. Ensure that children understand how the columns relate to place value and what to do if the numbers are not all 4-digit numbers.		$2,417 + 6,834 = 9,251$ $6,834 + 2,417 = 9,251$ $9,251 - 2,417 = 6,834$ $9,251 - 6,834 = 2,417$
Use rounding and estimating to find answers. Pupils must choose the most efficient method for addition – number lines, mentally or column method. Recognise that questions such as $2001 + 3400$ are solved more efficiently with mental methods rather than column method,	Use place value counters or represent pictorially. Use place value equipment on a place value grid to organise thinking. Ensure that children understand how the columns relate to place value and what to do if the numbers are not all 4-digit numbers.	Bar models may be used to represent additions in problem contexts, and to justify mental methods where appropriate. Eg $799 + 574$  Moving to...	$912 + 6,149 = ?$  I used rounding to work out that the answer should be approximately $1,000 + 6,000 = 7,000$. Rounding and adjusting I chose to work out $574 + 800$, then subtract 1. 

Year group objectives
Add whole numbers with up to 4 digits, including using formal written methods.
Estimate and use inverse operations to check answers to a calculation.
Solve addition 2 step problems in context
Solve addition problems including missing number facts, place value and more complex addition.

Example questions $3005 + 1000 =$ $2200 + 500 =$ $\underline{\hspace{1cm}} + 110 = 450$ $8998 + 2419 =$
 $3452 + 5230$ $< \text{ or } > \text{ or } =$ $2872 + 7098$

Answer: 475

Topic: Subtraction

Year 1

Stem sentence/ Maths talk

_____ is the whole. _____ is a part, _____ is a part and _____ is a part.

Notes / Vocabulary	Concrete	Pictorial	Abstract
Children develop the core ideas that underpin all calculation. They begin by connecting calculation with counting on and counting back, but they should learn that understanding wholes and parts will enable them to calculate efficiently and accurately, and with greater flexibility. They learn how to use an understanding of 10s and 1s to develop their calculation strategies, especially in addition and subtraction.	Children arrange objects and remove to find how many are left.  1 less than 6 is 5. 6 subtract 1 is 5.	Children draw and cross out or use counters to represent objects from a problem.   $9 - \square = \square$ There are $\square$ children left.	Children count back to take away and use a number line or number track to support the method.  $9 - 3 = 6$
	Children separate a whole into parts and understand how one part can be found by subtraction.  $8 - 5 = ?$	Children represent a whole and a part and understand how to find the missing part by subtraction.  $5 - 4 = \square$	Children use a part-whole model to support the subtraction to find a missing part. $7 - 3 = ?$  Children develop an understanding of the relationship between addition and subtraction facts in a part-whole model.  $\square - \square = \square$ $\square - \square = \square$ $\square + \square = \square$ $\square + \square = \square$

Year group objectives

read, write and interpret mathematical statements involving addition (+), subtraction (-) and equals (=) signs

represent and use number bonds and related subtraction facts within 20

add and subtract one-digit and two-digit numbers to 20, including 0

solve one-step problems that involve addition and subtraction, using concrete objects and pictorial representations, and missing number problems such as $7 = ? - 9$

Topic: Subtraction

Year 1

Notes / Vocabulary	Concrete	Pictorial	Abstract
More than Less than Difference Efficient	Arrange two groups so that the difference between the groups can be worked out.  8 is 2 more than 6. 6 is 2 less than 8. The difference between 8 and 6 is 2	Represent objects using sketches or counters to support finding the difference.  $5 - 4 = 1$ The difference between 5 and 4 is 1	Children understand 'find the difference' as subtraction.  $10 - 4 = 6$ The difference between 10 and 6 is 4.
	Understand when and how to subtract 1s efficiently. Use a bead string to subtract 1s efficiently.  $5 - 3 = 2$ $15 - 3 = 12$	Understand when and how to subtract 1s efficiently.  $5 - 3 = 2$ $15 - 3 = 12$	Understand how to use knowledge of bonds within 10 to subtract efficiently. $5 - 3 = 2$ $15 - 3 = 12$

Year group objectives

read, write and interpret mathematical statements involving addition (+), subtraction (-) and equals (=) signs

represent and use number bonds and related subtraction facts within 20

add and subtract one-digit and two-digit numbers to 20, including 0

solve one-step problems that involve addition and subtraction, using concrete objects and pictorial representations, and missing number problems such as $7 = ? - 9$

Topic: Subtraction

Year 1

Notes / Vocabulary	Concrete	Pictorial	Abstract
	For example: $18 - 12$ Use ten frames to represent the efficient method of subtracting 12.  First subtract the 10, then subtract 2.	For example: $18 - 12$ Subtract 12 by first subtracting the 10, then the remaining 2.  First subtract the 10, then take away 2.	Use a part-whole model to support the calculation. $19 - 14$ $19 - 10 = 9$ $9 - 4 = 5$ So, $19 - 14 = 5$ 
	For example: $12 - 7$ Arrange objects into a 10 and some 1s, then decide on how to split the 7 into parts.  7 is 2 and 5, so I take away the 2 and then the 5.	Represent the use of bonds using ten frames.  For $13 - 5$, I take away 3 to make 10, then take away 2 to make 8.	Use a number line and a part-whole model to support the method. $13 - 5$ 

Year group objectives

read, write and interpret mathematical statements involving addition (+), subtraction (-) and equals (=) signs

represent and use number bonds and related subtraction facts within 20

add and subtract one-digit and two-digit numbers to 20, including 0

solve one-step problems that involve addition and subtraction, using concrete objects and pictorial representations, and missing number problems such as $7 = ? - 9$

Topic: Subtraction

Year 2

Stem sentence/ Maths talk

I need to subtract ____ to get to 10
I can partition ____ into ____ and ____
I need to subtract ____ more.
____ less than ____ is ____

When subtracting, the answer will be ____ than the number I start with.
____ + ____ = 10, so $10 - \text{____} = \text{____}$
If $10 - \text{____} = \text{____}$, then $\text{____} - \text{____} = \text{____}$

Year group objectives

solve problems with addition and subtraction: using concrete objects and pictorial representations, including those involving numbers, quantities and measures

applying their increasing knowledge of mental and written methods

recall and use addition and subtraction facts to 20 fluently, and derive and use related facts up to 100

add and subtract numbers using concrete objects, pictorial representations, and mentally, including: a two-digit number and 1s
a two-digit number and 10s
2 two-digit numbers
adding 3 one-digit numbers

show that addition of 2 numbers can be done in any order (commutative) and subtraction of 1 number from another cannot

recognise and use the inverse relationship between addition and subtraction and use this to check calculations and solve missing number problems

Notes / Vocabulary	Concrete	Pictorial	Abstract																			
The use of concrete resources such as ten frames and counters, base 10 and Rekenreks can support children in choosing the most efficient way to partition the 1-digit number they are subtracting and can also aid their understanding. Other representations, such as number lines for representing calculations and part-whole models for partitioning, are also useful throughout. All of these will support children as they start to move towards a mental strategy for subtracting across a 10.	Use known number bonds and unitising to subtract multiples of 10.  8 tens subtract 6 tens is 2 tens. So, 8 tens subtract 6 tens is 2 tens.	Use known number bonds and unitising to subtract multiples of 10.  $10 - 3 = 7$ So, 10 tens subtract 3 tens is 7 tens.	Use known number bonds and unitising to subtract multiples of 10.  7 tens subtract 5 tens is 2 tens. $70 - 50 = 20$																			
	Subtract the 1s. This may be done in or out of a place value grid.  <table border="1" data-bbox="484 1175 736 1323"><thead><tr><th>T</th><th>O</th></tr></thead><tbody><tr><td></td><td></td></tr><tr><td></td><td></td></tr></tbody></table>	T	O					Subtract the 1s. Year 3

Stem sentence/ Maths talk

There are ten tens in one hundred.
There are one hundred ones in one hundred.
___ones/tens/hundreds plus/minus ones/tens/hundreds is equal to ___ones/tens/hundreds
If I have ___tens, I can exchange them for ___ones.
If I have ___hundreds, I can exchange them for ___tens and ___ones
I will exchange 1 hundred for ___tens, then 1 ten for ___ones.
There are ___hundreds ___tens and ___ones. The answer is _____

Year group objectives

Subtract numbers with up to 3 digits using formal written methods.

Subtract numbers mentally including –
3 digit number and ones
3 digit number and tens
3 digit number and hundreds

Estimate the answer to a calculation and use inverse operations to check answer.

Solve subtraction problems including missing number facts, place value and more complex subtraction.

Notes / Vocabulary	Concrete	Pictorial	Abstract
Subtraction, difference total altogether, half, halve, one less, two less ... ten less ... one hundred less, inverse Note: stress importance of ‘difference’ as subtraction language Use of place value counters to subtract HTO + TO, HTO + HTO etc. once the children have had practice, they should be able to apply it to larger numbers and the abstract	Without regrouping Work out 769 – 147  With regrouping Column method (using place value counters) 234-88 	Once the children have had practice with the concrete, they should be able to apply it to any subtraction. Like the other pictorial representations, children to represent the counters.   Draw the Base 10 or place value counters alongside the written calculation to help to show working. Calculations $\begin{array}{r} 542 \\ - 22 \\ \hline 520 \end{array}$ $\begin{array}{r} 176 \\ - 64 \\ \hline 112 \end{array}$ 242 - 26 =

<u>Stem sentence</u> Equal groups/ unequal groups There are (number) groups/lots/sets of (number/ item). <i>There are 3 groups of 5 cars.</i> This is not (number) groups/lots/sets of (number/ item) as they are not equal groups. <i>This is not 2 groups of 10 sweets, as they are not equal groups.</i>		Arrays In this array, there is/ are (number/ item) in each row. There is/ are (number) rows of (number/ items). <i>In this array, there are 5 oranges in each row.</i> <i>There are 6 rows of 5 oranges.</i> In this array, there is/ are (number/ item) in each column. There is/ are (number) columns of (number/ item). <i>In this array, there are 10 cookies in each column.</i> <i>There are 3 columns of 10 cookies.</i>		Double Double (number) is (number). <i>Double 5 is 10.</i> Twice as much as (number) is (number). • <i>Twice as much as 5 is 10</i>		Year group objectives
To understand multiplication is related to doubling and combing groups of the same size (repeated addition)						
Notes / Vocabulary	Concrete	Pictorial	Abstract			
Double Twice as much Odd Even Equal groups Groups of Lots of repeated addition	Children will double using concrete resources such as base 10, pv counters and numicon. 	Draw pictures to show how to double numbers Double 4 is 8 	Children will learn to partition a number and then double each part before recombining it back together. 			Counting in multiples (2s, 5s, 10s) including making equal groups and counting the total
To solve one-step problems involving multiplication and division, by calculating the answer using concrete objects, pictorial representations and arrays with the support of the teacher.						

Topic: Multiplication

Year 1

Equal groups Increase Decrease Skip Counting Multiples Grouping	 Children count the total in all of the equal groups and recognise patterns.	Children will verbally say the numbers aloud as they count to demonstrate their understanding. 	Count in multiples of a number aloud. Write sequences with multiples of numbers. 2, 4, 6, 8, 10 5, 10, 15, 20, 25 , 30
Understanding arrays Children see that 2 groups of 3 and 3 groups of 2 will both give a total of 6.	 Children will use concrete objects to describe 2 groups of 3 and 3 groups of 2.	Children will draw their own representation of arrays or use pictures to show their understanding. 2 groups of 4 4 groups of 2 	2 groups of 5 6 groups of 10 Children will use knowledge of skip counting and arrays to calculate answers.

Year group objectives
To understand multiplication is related to doubling and combing groups of the same size (repeated addition)
Counting in multiples (2s, 5s, 10s) including making equal groups and counting the total

Example Questions

How many fingers are there altogether?

_____ + _____ + _____ = _____

How many children are there altogether?

_____ + _____ + _____ = _____

Fill in the numbers to describe the array.

_____ + _____ = _____

_____ + _____ + _____ + _____ + _____ = _____

Complete.

Double _____ is _____

Double _____ is _____

Double _____ is _____

To solve one-step problems involving multiplication and division, by calculating the answer using concrete objects, pictorial representations and arrays with the support of the teacher.

Year 2 Topic: Multiplication

<u>Stem sentence</u> There are ____ equal groups with ____ in each group. There are _____ altogether. There are <u> 2 </u> equal groups with 3 in each group. There are <u> 2 </u> 3s. <u> 3 </u> + <u> 3 </u> = 6 ----x ---- = ----lots of ---- =			
Notes / Vocabulary	Concrete	Pictorial	Abstract
Equal groups, multiply, repeated addition, multiplication symbol, lots of, arrays, commutative, 2,3,5 and 10 times table. Children will start to understand that multiplying by 2 is doubling. They may see that when multiplying by an even number the answer will be even but can be odd or even when multiplying by an odd number.	Children make equal groups for the 2,3,5 and 10 times tables with concrete resources and skip count. Link this to the x 'groups of' 'lots of' symbol. 5 groups of 3 equals 15 5 multiplied by 3 equals 15 5 lots of 3 equals 15  Doubling will be understood by using concrete resources for two equal groups and calculating through counting, skip counting or repeated addition.	Children can draw groups to support working out and either count totals, use repeated addition or skip count. 	Children can recall the 2,3,5 and 10 times tables through memory or by counting up in steps. Children may write down the numbers to support themselves. 0,5,10,15,.....

Year group objectives

- Recall and use multiplication facts for the 2, 5 and 10 multiplication tables, including recognising odd and even numbers
- Calculate mathematical statements for multiplication and write them using the multiplication (×) and equals (=) signs
- Children will be able to represent a multiplication calculation using an array. Children will also understand that multiplication can be carried out in any order (commutative)

Topic: Multiplication

Year 2

Children will understand what a multiplication sentence represents. They will be able to understand that 3 x 5 and 5 x3 will look different in terms of groups and number in groups but will produce the same total.	Children can use counters, cubes or any other suitable resources to make multiplication sentences. <i>Make 2 groups of 12 or 2 x 12</i> 	Children will use pictures or draw their own to support understanding.  6 lots of 5 = 30 6 multiplied by 5 = 30 6 x 5 = 30	Children will be able to calculate mathematical statements for multiplication and show these using x and = signs. How much money does Ron have?  Complete the multiplication. x = Ron has p.						
It important that children understand the different calculations in an array e.g. 4x5 and 5x4 despite the totals being the same	Children will use concrete resources such as counters to make arrays and calculate the multiplication sentences that this generates recognising that the totals are the same. 	Children can draw an array to represent a multiplication calculation. They can group to show that multiplication is commutative. <table><tr><th>Multiplication</th><th>Array 1</th><th>Array 2</th></tr><tr><td>3 x 8</td><td></td><td></td></tr></table>	Multiplication	Array 1	Array 2	3 x 8			Children can use their preferred method of multiplication when calculating multiplications e.g. a pupil may choose to swap 8 x 5 for 5 x 8 and use the 5 times tables as they will understand that it will produce the same total. 9 x 3 = 3x9 = 12 x 2 = 2 x 12 =
Multiplication	Array 1	Array 2							
3 x 8									

Year group objectives

Recall and use multiplication facts for the 2, 5 and 10 multiplication tables, including recognising odd and even numbers

Calculate mathematical statements for multiplication and write them using the multiplication ($\times$) and equals ($=$) signs

Children will be able to represent a multiplication calculation using an array. Children will also understand that multiplication can be carried out in any order (commutative)

KS1 Example Questions

$2 \times 7 =$

$10 \times 5 =$

22

A wall has 5 bricks in each row.
How many bricks are there in 6 rows?

8 children are eating plums.
Each child eats 2 plums.
How many plums do they eat altogether?

Topic: Multiplication

Year 3

Stem sentence

There are equal groups with in each group. There are ____ altogether.
There are ____ lots of ____
The groups are equal because ____
____ hundreds multiplied by ____ is equal to ____ ____ tens multiplied by ____ is equal to ____ ____ ones multiplied by ____ is equal to ____
____ multiplied by ____ is equal to ____
Four is double two, so ____ fours is double ____ twos. etc
____ times four is equal to double ____ times two etc
For every one group of ____, there are two groups of ____

Notes / Vocabulary	Concrete	Pictorial	Abstract																																
multiplication multiply multiplied by multiple, repeated addition doubling array inverse Extended practical and pictorial methods looking at X as repeated addition and partitioning prior to pupils tackling written methods	Represent multiplication as repeated addition <table border="1"><thead><tr><th>Tens</th><th>Ones</th></tr></thead><tbody><tr><td></td><td></td></tr><tr><td></td><td></td></tr><tr><td></td><td></td></tr><tr><td></td><td></td></tr></tbody></table> No exchange <table border="1"><tbody><tr><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td></tr></tbody></table>	Tens	Ones																					Representing the counters pictorially <table border="1"><thead><tr><th>Tens</th><th>Ones</th></tr></thead><tbody><tr><td></td><td></td></tr><tr><td></td><td></td></tr><tr><td></td><td></td></tr><tr><td></td><td></td></tr></tbody></table>	Tens	Ones									Show link to multiplication $\square + \square + \square + \square = \square$ $\square \times \square = \square$ Part whole models to expose structure $23 = 20 + 3$ $20 \times 3 = 60$ $3 \times 3 = 9$ If appropriate, moving towards formal written methods. $\begin{array}{r} 23 \\ \times 3 \\ \hline 69 \end{array}$
Tens	Ones																																		
Tens	Ones																																		

Year group objectives

Recall and use multiplication and division facts for the 3, 4 and 8 multiplication tables

Write and calculate mathematical statements for multiplication and division using the multiplication tables that they know, including 2 digit X 1 digit, using mental and progressing to formal written methods

Solve problems, including missing number problems, involving multiplication and division, including positive integer scaling problems and correspondence problems in which n objects are connected to m objects.

Topic: Multiplication

Year 3

Notes / Vocabulary	Concrete	Pictorial	Abstract	Year group objectives
Deines and base 10 can be used alongside pictorial methods. Move towards formal written methods if appropriate.	Exchanging Deins or place value counters 	Use of place value grid and drawn images 	24 204 4 × 20 = 80 4 × 4 = 16 80 + 16 = 96 4 × 24 = 96 4 × 20 = 80 4 × 4 = 16 If appropriate, use of formal written methods 24 × 3 72 1	Recall and use multiplication and division facts for the 3, 4 and 8 multiplication tables
Mental strategies and inverse operations involving fact families. Part whole models to support. Pupils to begin tackling correspondence and scaling problems.	Use place value counters, or represent pictorially.	Bar models can be used to help solidify multiplication tables knowledge ____ × ____ = ____ Children develop their understanding of correspondence and scaling problems. Scaling: e.g. Find a ribbon that is 4 times as long as the blue ribbon 	Children use symbols to stand for unknown numbers to complete equations using inverse operations: $\square \times 5 = 20$ $3 \times \triangle = 18$ $\square \times \bigcirc = 32$	Write and calculate mathematical statements for multiplication and division using the multiplication tables that they know, including 2 digit X 1 digit, using mental and progressing to formal written methods Solve problems, including missing number problems, involving multiplication and positive integer scaling problems and correspondence problems in which n objects are connected to m objects.
Example questions: 7 x 3 = ____ x 5 = 25 4 x ____ = 16				

Topic: Multiplication

Year 4

Stem sentence

The product of _____ and _____ tens multiplied by is equal to _____
_____ ones multiplied by is equal to _____
_____ multiplied by is equal to _____
_____ tens and _____ ones multiplied by _____ is equal to _____

Year group objectives

Recall multiplication and division facts for tables up to 12×12

Use place value, known and derived facts to multiply and divide mentally, including: multiplying by 0 and 1; dividing by 1; multiplying together three numbers

Recognise and use factor pairs and commutativity in mental calculations

Multiply two-digit and three-digit numbers by a one-digit number using formal written layout.

Solve problems involving multiplying and adding, including using the distributive law to multiply two digit numbers by one digit, integer scaling problems and harder correspondence problems such as n objects are connected to m objects.

Notes / Vocabulary	Concrete	Pictorial	Abstract																				
Multiplication, multiply multiplied by, multiple, factor groups, doubling array, inverse, remainder, factor, factor pairs, product, commutative Pupils build on learning in Y3 by moving towards multiplying 3 digit by 1 digit with exchanges	No exchange Use of place value counters or Deins <table border="1"><thead><tr><th>Hundreds</th><th>Tens</th><th>Ones</th></tr></thead><tbody><tr><td></td><td></td><td></td></tr></tbody></table> Exchange 6×23 Step 1: get 6 lots of 23 Step 2: 6×3 is 18. Can I make an exchange? Yes! Ten ones for one ten.... Step 3: 6×2 tens and my extra ten is 13 tens. Can I make an exchange? Yes! Ten tens for one hundred... Step 4: what do I have in each column? 15×20
 15×8

$$\frac{12}{15} = \frac{4}{5}$$

Answer: $28 \frac{4}{5}$

$432 \div 15$ becomes

$$\begin{array}{r} 28.8 \\ 15 \overline{) 432.0} \\ \underline{30} \\ 132 \\ \underline{120} \\ 120 \\ \underline{120} \\ 0 \end{array}$$

Answer: 28.8

Topic: Division

Year 1

Stem sentence/ Maths talk _____ apples are shared equally between _____ boxes.

Share the apples equally between the 3 boxes. There are _____ in each group.

The _____ have/have not been shared equally.

I know this because ...

There are _____ altogether.

They are shared equally between _____ groups.

There are _____ in each group.

Year group objectives

solve one-step problems involving multiplication and division, by calculating the answer using concrete objects, pictorial representations and arrays with the support of the teacher

Notes / Vocabulary	Concrete	Pictorial	Abstract
Children first explore this practically using concrete resources and physically sharing them into groups. They should see that each group will then have the same amount. At this stage, children do not need to write number sentences using the division symbol, but they should be encouraged to explain what is happening using the language of division, for example “There are counters shared equally into groups. There are _____ in each group.” It may be helpful to explore the similarities and differences between sharing and grouping, once children are confident with the two structures separately. As an extension, children can look at situations where the objects cannot be shared equally and there are some left over.	Learn to make equal groups from a whole and find how many equal groups of a certain size can be made. Sort a whole set people and objects into equal groups.  There are 10 children altogether. There are 2 in each group. There are 5 groups.	Represent a whole and work out how many equal groups.  There are 10 in total. There are 5 in each group. There are 2 groups.	Children may relate this to counting back in steps of 2, 5 or 10.  10 shared into 2 equal groups gives 5 in each group.
	Share a set of objects into equal parts and work out how many are in each part. 	Sketch or draw to represent sharing into equal parts. This may be related to fractions. 	

Topic: Division

Year 2

Stem sentence/ Maths talk			
_____ are shared equally between _____. Each child gets _____ _____ divided between _____ is equal to _____ each. I have twenty conkers and I share them equally between five children. How many conkers does each child have?  Twenty conkers are shared equally between five children. Each child gets four conkers.			
Notes / Vocabulary	Concrete	Pictorial	Abstract
Equal, sharing, whole, division.	Start with a whole and share into equal parts, one at a time.  12 shared equally between 2. They get 6 each. Start to understand how this also relates to grouping. To share equally between 3 people, take a group of 3 and give 1 to each person. Keep going until all the objects have been shared	Represent the objects shared into equal parts using a bar model.  20 shared into 5 equal parts. There are 4 in each part.	Use a bar model to support understanding of the division.  $18 \div 2 = 9$

Year group objectives

- recall and use multiplication and division facts for the 2, 5 and 10 multiplication tables, including recognising odd and even numbers
- calculate mathematical statements for multiplication and division within the multiplication tables and write them using the multiplication ($\times$), division ($\div$) and equals ($=$) signs
- show that multiplication of 2 numbers can be done in any order (commutative) and division of 1 number by another cannot
- solve problems involving multiplication and division, using materials, arrays, repeated addition, mental methods, and multiplication and division facts, including problems in contexts

Topic: Division

Year 2

Notes / Vocabulary	Concrete	Pictorial	Abstract
Grouping, division, multiplication, total.	Understand how to make equal groups from a whole.  8 divided into 4 equal groups. There are 2 in each group	Understand the relationship between grouping and the division statements. $12 \div 3 = 4$  $12 \div 4 = 3$  $12 \div 6 = 2$  $12 \div 2 = 6$ 	Understand how to relate division by grouping to repeated subtraction. 12 divided into groups of 3. $12 \div 3 = 4$ There are 4 groups.  There are 4 groups now.
	Understand the relationship between multiplication facts and division. 4 groups of 5 cars is 20 cars in total. 20 divided by 4 is 5. 	Link equal grouping with repeated subtraction and known times-table facts to support division.  40 divided by 4 is 10. Use a bar model to support understanding of the link between times-table knowledge and division. 	Relate times-table knowledge directly to division. I know that 3 groups of 10 makes 30, so I know that 30 divided by 10 is 3. $3 \times 10 = 30$ so $30 \div 10 = 3$ $1 \times 10 = 10$ $2 \times 10 = 20$ $3 \times 10 = 30$ $4 \times 10 = 40$ $5 \times 10 = 50$ $6 \times 10 = 60$ $7 \times 10 = 70$ $8 \times 10 = 80$ I used the 10 times-table to help me. $3 \times 10 = 30$.

Year group objectives
recall and use multiplication and division facts for the 2, 5 and 10 multiplication tables, including recognising odd and even numbers
calculate mathematical statements for multiplication and division within the multiplication tables and write them using the multiplication ($\times$), division ($\div$) and equals ($=$) signs
show that multiplication of 2 numbers can be done in any order (commutative) and division of 1 number by another cannot
solve problems involving multiplication and division, using materials, arrays, repeated addition, mental methods, and multiplication and division facts, including problems in contexts

Topic: Division

Year 3

Stem sentence

___ partitioned into tens and ones is ___ tens and ___ ones.
___ divided by ___ is equal to ___
___ can be partitioned into ___ and ___ as these numbers are both multiples of ___
___ divided by ___ is equal to ___
There are ___ groups of ___ There are ___ remaining. So $__ \div __ = __ r$

Year group objectives

Recall and use multiplication and division facts for the 3, 4 and 8 multiplication tables

Write and calculate mathematical statements for multiplication and division using the multiplication tables that they know, including for two-digit numbers times one-digit numbers, using mental and progressing to formal written methods

Solve problems, including missing number problems, involving multiplication and division, including positive integer scaling problems and correspondence problems in which n objects are connected to m objects.

Notes / Vocabulary	Concrete	Pictorial	Abstract
division dividing, divide, divided by, divided into left, left over, remainder grouping, sharing, share, share equally one each, two each, three each ... ten each group in pairs, threes ... tens equal groups of, inverse	 8 grouped into 2s $8 \div 2$ Dividing as grouping 8 grouped into 2s There are 4 groups of 2 in 8  $8 \div 2 = 4$ Dividing as sharing 8 shared between 2 There are 4 in each group Use of Cuisenaire rods and rulers (using repeated subtraction)  2d divided by 1d using base 10 (no remainders) Sharing, starting with the tens 	 8 shared equally between 2	 Use of number lines to show repeated subtraction $48 \div 4$ 4 tens $\div 4 = 1$ ten 8 ones $\div 4 = 2$ ones $10 + 2 = 12$

Mental strategies and inverse operations involving fact families. Part whole models to support.		Three friends have 24 coins.  We can draw a bar model to show how many coins each one has.  How many coins does each one have? $24 \div 3 = 8$   	$4 \times 5 = 20$$5 \times 4 = 20$$20 \div 5 = 4$$20 \div 4 = 5$ $5 + 5 + 5 + 5 = 20$$4 + 4 + 4 + 4 + 4 = 20$$20 - 5 - 5 - 5 - 5 = 0$$20 - 4 - 4 - 4 - 4 - 4 = 0$	Recall and use multiplication and division facts for the 3, 4 and 8 multiplication tables
				Write and calculate mathematical statements for multiplication and division using the multiplication tables that they know, including for two-digit numbers times one-digit numbers, using mental and progressing to formal written methods
				Solve problems, including missing number problems, involving multiplication and division, including positive integer scaling problems and correspondence problems in which n objects are connected to m objects.

Example questions

$36 \div 4 =$
 $__ \div 2 = 5$

There are 24 strawberries in a tub. I share them equally between the 4 people in my family. How many does each person get?

Write <, > or = to complete the statements.

$48 \div 4$ $45 \div 3$

$52 \div 4$ $42 \div 3$

Topic: Division

Year 4

Stem sentence

___ones divided by ___ = ___ ones each
___I cannot share all of the tens equally, so I need to ...
There are ___groups of ___ There are ___ remaining. So $\text{___} \div \text{___} = \text{___} \text{ r}$
___ is a multiple of ___, so when it is divided into groups of ___ there are none left over; there is no remainder.
___ is not a multiple of ___, so when it is divided into groups of ___ there are some left over; there is a remainder.

Notes / Vocabulary	Concrete	Pictorial	Abstract
division dividing, divide, divided by, divided into left, left over, remainder grouping sharing, share, share equally one each, two each, three each ... ten each group in pairs, threes ... tens equal groups of inverse	Without exchanges 2 digits  With exchanges 2 digits 	Use place value chart or similar to pictorially share out.  	Flexible partitioning $42 \div 3$ 

Year group objectives

Recall multiplication and division facts for tables up to 12×12

Use place value, known and derived facts divide mentally, including: dividing by 1;

Recognise and use factor pairs and commutativity in mental calculations

Solve problems involving integer scaling problems and harder correspondence problems such as n objects are connected to m objects.

Topic: Division

Year 4

Notes / Vocabulary	Concrete	Pictorial	Abstract
Pupils progress to dividing 3 digits with remainders Mental strategies and inverse operations involving fact families. Part whole models to support.	With remainders $83 \div 3$ 3 digits with exchanges	Represent place value counters pictorially $23 \times 6 = ?$ $30 \times 4 = 120$	with flexible partitioning $83 \div 3 = 27 \text{ r}2$ $95 \div 4 = 23 \text{ r}3$ $134 \div 4 = 33 \text{ r}2$ $365 \div 6 = 60 \text{ r}5$

Year group objectives
Recall multiplication and division facts for tables up to 12×12
Use place value, known and derived facts divide mentally, including: dividing by 1;
Recognise and use factor pairs and commutativity in mental calculations
Solve problems involving integer scaling problems and harder correspondence problems such as n objects are connected to m objects.

<u>Example questions</u> _____	$96 \div 8 =$	Which of these division calculations have the answer of 3 r 2			Has a remainder? (Yes or No)	It takes 7 minutes to make a pom-pom. How many complete pom-poms can Malik make in 30 minutes?
	$__\div 7 =$	$23 \div 7$	$17 \div 5$	$32 \div 6$	$48 \div 7$	
		$7 \div 2$	$14 \div 4$	$30 \div 8$	$48 \div 8$	
					$48 \div 9$
